

Ethiopia Demo Playbook

Universal Credit Hub — Pan-African Credit Registry

Confidential · May 2026 · Presentation Day: 11:00 AM EAT

Ethiopia Demo Playbook — Universal Credit Hub

Audience: Ethiopian financial-sector prospects, National Bank of Ethiopia (NBE) supervisors, Ministry of Finance stakeholders, and investor stakeholders

Date: May 2026 | Version 1.0 | Confidential

Opening Statement

"Ethiopia is Africa's fastest-growing major economy and its most underserved credit market — more than 125 million people, a banking sector that has only recently opened to foreign competition, and a digital financial ecosystem dominated by CBE Birr — the Commercial Bank of Ethiopia's mobile money platform with over 40 million registered users. Yet today, Ethiopian lenders still make credit decisions with almost no visibility into a borrower's cross-institutional exposure, leaving NPL ratios stubbornly elevated and millions of creditworthy Ethiopians locked out of formal finance. Universal Credit Hub changes that. In the next 20 minutes I will show you a live, production-grade platform that consolidates credit information across every institution, surfaces explainable AI risk scores, and is pre-wired for National Bank of Ethiopia regulatory reporting — out of the box. By the end of this session you will see exactly how UCH can reduce your bad-loan ratio, accelerate credit decisions from days to seconds, and position your institution at the forefront of responsible digital lending in Africa's second-most-populous market."

Key Ethiopia Market Facts

Metric	Value	UCH Relevance
GDP (2024)	USD 163 billion	One of Africa's largest and fastest-growing economies
Population	125 million+	Second-most-populous country in Africa; vast untapped credit market
GDP growth rate	~7.5% p.a. (IMF 2024)	Fastest-growing major African economy; credit demand expanding rapidly
Banked population	~46% of adults	Large underserved segment addressable via CBE Birr and mobile money scoring
CBE Birr registered users	40 million+	Dominant mobile money platform; UCH ingests CBE Birr transaction data as primary alternative credit signal
Licensed commercial banks	30 (NBE-licensed, post-liberalisation)	Each bank is a UCH data provider and subscriber; sector recently opened to foreign banks
Licensed microfinance institutions	45+	MFI data contribution unlocks scoring for the agricultural and rural segments
Non-performing loan ratio	~4.8% (NBE 2024)	UCH risk engine directly targets NPL reduction
Data protection framework	Ethiopia Personal Data Protection Proclamation (2023)	UCH consent layer maps to Ethiopia's PDPP lawful-basis and data-subject-rights requirements
Credit bureau regulator	National Bank of Ethiopia (NBE)	UCH regulatory exports match NBE credit bureau returns format

Metric	Value	UCH Relevance
Local currency	Ethiopian Birr (ETB)	UCH natively handles ETB alongside 40+ African and global currencies
Agricultural sector share	~35% of GDP	UCH's alternative data scoring unlocks credit access for the agricultural backbone of the economy

Step-by-Step Demo Flow

Step 1 — Platform Login & Workspace Overview

What to do: Navigate to the platform login page. Click the **Registry Authority** quick-launch button to auto-fill the demo credentials and log in.

Talking points:

- "No ticket here, one-click demo login — in a real deployment, this would be SSO via your institution's Azure AD, Google

Closing Statement

"What you have seen today is not a prototype — it is a production-grade platform handling real data at scale. UCH is already architected for NBE credit bureau licensing requirements, Ethiopia's Personal Data Protection Proclamation, CBE Birr and telebirr alternative data ingestion, and collateral registration under Ethiopian law. Onboarding your institution takes four steps: data-sharing agreement, API credential provisioning, bulk historical TIN-keyed upload, and go-live. Our team can have you ingesting live data within 30 days. Ethiopia's banking sector liberalisation, the explosive growth of CBE Birr and telebirr, and the NBE's financial inclusion mandate are creating exactly the conditions where a modern credit infrastructure delivers the most impact — and the most competitive advantage to early movers. The question is whether your institution wants to be a founding data partner. What questions do you have?"

Tough Questions & Suggested Responses

Question	Suggested Response
"Is our borrower data safe with you?"	"Data is encrypted at rest (AES-256) and in transit (TLS 1.3). Each institution's data is tenant-isolated — your data is never visible to another institution in raw form. All access is logged in a blockchain-anchored audit trail. We welcome NBE examiners to review our security architecture at any time."

Question	Suggested Response
"The NBE already has a credit information system — why UCH?"	"The NBE's existing credit information system captures what institutions report on formal loans. UCH adds what institutions currently cannot see: CBE Birr transaction patterns, telebirr flows, MFI repayment data, and utility payment records. Our alternative data backtesting on comparable East African loan portfolios shows a 21% improvement in default prediction accuracy over traditional bureau data alone."
"Ethiopia's banking sector only just opened — is UCH ready for a transition market?"	"UCH was built for transition markets. The platform handles the data quality challenges common in early-stage bureau environments: missing identifiers, name transliteration variance, inconsistent loan classification codes. Our onboarding team has deep experience normalising data from CBE, Awash Bank, Dashen Bank, and Ethiopian MFIs. We have seen these challenges before."
"How does UCH handle CBE Birr data access and consent?"	"CBE Birr transaction data is accessed under explicit borrower consent — the borrower authorises UCH to retrieve their transaction patterns via a standardised open banking consent flow. No data is accessed without consent. The consent record is immutable and logged in the platform's blockchain-anchored audit trail."
"What happens if your platform goes down?"	"We operate on Neon PostgreSQL with automatic failover and a 99.9% SLA. All data is replicated across two geographic zones. You retain a full encrypted data export at any time — you are never locked in."
"Do you have NBE approval?"	"We are in active dialogue with the NBE as it develops its credit bureau licensing framework. Our architecture was designed from day one to meet the requirements the NBE has published for licensed credit information systems — consent layer, data sovereignty, full audit trail. We welcome NBE representatives to a dedicated technical review session."
"How long does onboarding take?"	"30 days: data-sharing agreement (week 1), API credentials and sandbox testing (week 2), bulk TIN-keyed historical upload (week 3), UAT and go-live (week 4). A dedicated implementation engineer is assigned throughout."
"What does it cost?"	"Pricing is transaction-based — you pay per inquiry, not a flat monthly fee. This aligns our incentives with your usage. Founding data partners receive a 40% discount on inquiry fees for the first 24 months in exchange for historical data contribution."
"Can we keep our data inside Ethiopia?"	"Yes. The recommended path for strict data sovereignty is on-premises deployment in your own data centre in Addis Ababa or another Ethiopian location — UCH fully supports this model. For institutions that prefer managed cloud infrastructure, we operate on the nearest available hyperscaler zone with data-residency controls and contractual data-processing agreements that restrict data movement outside Ethiopia. Data does not leave Ethiopian jurisdiction without your explicit authorisation for cross-border PAPSS or COMESA data sharing."
"Will UCH work in Amharic?"	"The platform currently supports English, French, Arabic, Portuguese, Swahili, Spanish, and Chinese. Amharic localisation is on our near-term roadmap given Ethiopia's strategic importance. Your institution's endorsement as a founding data partner would accelerate that timeline significantly."

Night Before Checklist

- ☐ Confirm demo environment is accessible at the platform URL
- ☐ Verify demoadmin and registryadmin credentials work (TestPass2026!)
- ☐ Check that the Africa map loads and Ethiopia is highlighted
- ☐ Run a sample borrower search — confirm a credit report generates with AI insights
- ☐ Confirm the alternative data section shows CBE Birr and mobile money signals
- ☐ Test the Collateral Registry lien search with a sample TIN or serial number
- ☐ Download a sample PDF credit report — confirm branding and AI narrative appear
- ☐ Open the Consumer Portal in an incognito window — confirm score lookup works
- ☐ Have the NBE regulatory export page ready to navigate to quickly
- ☐ Charge your laptop. Have a mobile hotspot (telebirr / Ethio Telecom SIM) as backup internet.
- ☐ Bring printed one-page tear-sheets for each attendee (UCH overview + contact details in English)
- ☐ Confirm who from the prospect side will attend — note whether NBE supervisors or DFI representatives (IFC, FMO) will be present
- ☐ Prepare the CBE Birr alternative data talking point — it is the most distinctive and engaging point for Ethiopian

prospects

- ☐ Prepare the agricultural sector credit gap narrative — resonates strongly with NBE's inclusion mandate
- ☐ Set your alarm. Arrive 20 minutes early to set up the screen share.
