AI RISK ASSESSMENT — GPT-4o

LOW RISK Score: 15/100

Augustina Amankwah demonstrates a low credit risk profile with a single active microfinance loan in good standing and no delinquent accounts. However, the lack of employment information introduces some uncertainty.

CONTRIBUTING FACTORS

- + **Monthly Income:** A monthly income of GHS 15,930.00 suggests strong repayment capacity relative to the outstanding loan balance.
- + **Credit Account Status:** The borrower has one active account with no delinquencies or defaults, indicating responsible credit behavior.
- + **Total Outstanding Balance:** The total outstanding balance of GHS 637.36 is minimal compared to the borrower's income.
- **Employment Status:** The borrower's employment status is unknown, which adds some uncertainty about the stability of income.
- **PEP Status:** The borrower is not a Politically Exposed Person (PEP), which reduces potential regulatory concerns.

AI RECOMMENDATIONS

- > Verify the borrower's employment status to confirm income stability.
- > Continue monitoring the borrower's credit account for any signs of delinquency.

AI CREDIT NARRATIVE — Claude

Creditworthiness: Good

Augustina Amankwah is an individual borrower based in Ghana, identified under National ID GHA-ID-223253, who presents a relatively straightforward credit profile with a single active credit facility. Her declared monthly income stands at GHS 15,930.00, although her employment status is currently unverified, which introduces a degree of uncertainty regarding the sustainability and source of her income. She holds no politically exposed person (PEP) designation, and there are no open disputes or adverse legal matters on her credit record.

Ms. Amankwah maintains one active microfinance loan with Absa Bank Ghana, originally disbursed at GHS 1,000.00, of which GHS 637.36 remains outstanding. The facility carries an interest rate of 33.42%, which is consistent with prevailing microfinance lending rates in the Ghanaian market. Notably, the account is reported as current with zero days in arrears, indicating that the borrower has been meeting her repayment obligations in a timely manner. The fact that approximately 36% of the original principal has already been repaid further demonstrates a positive repayment trajectory.

From a debt serviceability standpoint, the borrower's total outstanding obligation of GHS 637.36 is modest relative to her reported monthly income of GHS 15,930.00, resulting in a very low debt-to-income ratio of approximately 4%. This provides a substantial cushion for repayment capacity and suggests that the current credit exposure poses minimal strain on her financial resources. Even when accounting for the relatively high interest rate on the microfinance facility, the monthly repayment burden remains well within manageable thresholds.

However, several factors warrant careful consideration. The borrower's employment status remains unknown, which limits our ability to independently verify income stability and continuity. Additionally, the opening date of the existing facility is not recorded, making it difficult to assess the precise tenure of her repayment track record. Her credit history is also limited to a single account, which, while in good standing, does not provide sufficient depth to establish a robust long-term credit behavioral pattern. These gaps in information, while not disqualifying, do temper an otherwise favorable assessment.

In terms of risk factors, there are no material red flags. The absence of delinquencies, disputes, and arrears across her credit profile is encouraging. The borrower has demonstrated responsible credit behavior within the scope of her existing exposure, and her low leverage position suggests she is not over-extended. Should additional verification of her employment and income be obtained, and should her repayment performance continue on its current trajectory, she would be well-positioned for consideration of incremental credit facilities.

Based on the totality of the information reviewed, Ms. Amankwah presents a credit profile that is fundamentally sound but limited in depth. Her disciplined repayment behavior on her sole active facility, combined with a very low debt burden relative to reported income, supports a favorable view. However, the lack of verified employment details and the thin credit file prevent a higher-tier classification at this time. Overall, her creditworthiness is assessed as Good.

KEY STRENGTHS

+ Meaningful principal reduction achieved — approximately 36% of the original loan already repaid

+ No disputes, delinquencies, or adverse credit events on record

+ No PEP-related risk exposure

KEY RISKS

- Employment status is unknown, limiting independent verification of income source and stability
- Thin credit file with only one active account, insufficient to establish a long-term

behavioral pattern

- Facility opening date is unrecorded, making it difficult to assess repayment tenure and consistency

- High interest rate of 33.42% on the microfinance facility may indicate a higher-risk borrower segment
